Dear Sir / Madam

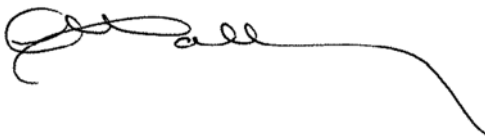

RE: Reference for AAA Asphalt for airport quality asphalt construction

Airport Consultancy Group is an Australian based consulting engineering company. We specialise in airport pavement design and construction and had the pleasure of working with AAA Asphalt on the Groote Eylandt airport overlay project. They were able to easily comply with the asphalt specification which was in line with typical Australian Airport industry quality specifications.

We observed the AAA team during a number of construction trials and we were impressed at how they were able to rapidly meet the high targets required to meet construction quality benchmarks and their desire to work collaboratively with the on-site superintendent and client team. A compliant mix design was provided early by AAA and all densities, and quality targets were complied with. Whilst there was some rework required of the asphalt, this was due to incorrectly issued construction documents and not due to AAA's work practices. The asphalt has been in place for approximately 6 months now with no signs of any visible defects.

We have no hesitation in recommending Frank and his team at AAA for airport asphalt projects. Please feel free to contact me if you have any questions.

Regards,

Craig Halliday
